

Title: Enhanced Global Information Sharing and Analysis to Improve Response to Critical Infrastructure Insults

Principal Investigator: Amy Kircher, University of Minnesota-Twin Cities

Center of Excellence: Food Protection and Defense Institute (FPDI) (Emeritus)

COE Lead/Co-Lead Institution: University of Minnesota

Project Start Date: 12/2013

Project Completion Date: 01/2016

Project Status: Complete

Research Theme: Information Sharing

Participating State(s): Minnesota

Amount Awarded to Date: \$40,304

Award Number: 2010-ST-061-FD0001

Abstract: This project proposes to research the legal barriers, perceptions, and company policies that allow or prohibit regular and proactively shared information on food system issues and/or disruptions. This information sharing is key to identifying threats to the food system from intentional adulteration (e.g. ingredient substitution, using food as a delivery mechanism for weapons of mass destruction), thus initiating the appropriate response to mitigate adverse consequences posed to human and animal health from ingestion of contaminated food products. The outcome of this research will provide new knowledge gained on industry procedural and technical information sharing requirements to help inform the private sector and regulators in determining information sharing procedures. Additionally, research outcomes will support transition of food and agriculture sector tools by identifying the requirements for information sharing for use within the tools (e.g., data access rights).

End User Engagement:

- DHS Science and Technology Directorate
- Food and Agriculture Industries
- Food and Drug Administration
- State and Local Public Health Agencies
- U.S. Department of Agriculture
